DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/5/2004 has been entered.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Patrick Boucher on 11/9/2004.

3. The application has been amended as follows:

Cancel claims 14-23

Allowable Subject Matter

4. Claims 1-13 are allowed.

Art Unit: 1765

5. The following is an examiner's statement of reasons for allowance: The closest prior art is Papasouliotis et al (US 6,030,881), Lane et al (US 5,061,838) and Zarowin et al (US 5,290,382). Papasouliotis et al discloses a plasma deposition process comprising varying an etch to deposition rate during processing to fill a gap and then changing the ratio to etch the gap (Abstract), which reads on applicants' limitation of flowing etchant gas into the process chamber without terminating the plasma and flowing an etchant to provide a net etching back. Lane et al discloses a toroidal plasma reactor for deposition and etching of semiconductor layers using a microwave source outside the chamber to generate plasma (col 11, ln 1-5; Abstract and Fig 1). Zarowin et al discloses a method of inductively producing a toroidal plasma comprising a core within a process chamber and a coil outside the process chamber (col 5, ln 5-20 and Fig 3). Papasouliotis et al, Lane et al and Zarowin et al do not teach or suggest inductively generating a toroidal plasma from a source disposed within the process chamber comprising a core and coil.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Smith et al (US 6,150,628) teaches a toroidal plasma source comprising a core and coil surrounding a chamber (col 5, ln 50-67 and Fig 1).
